

Ontario Influenza Bulletin 2005-2006 Season

SURVEILLANCE WEEK 49 (December 4 to December 10, 2005)

This issue of the Ontario Influenza Bulletin provides information on the surveillance period from December 4 to December 10, 2005. The analysis for this issue occurred on Thursday December 15th, therefore all data is current to that date.

During week 49, influenza activity remained low in Ontario. No sporadic cases or institutional outbreaks attributed to influenza were reported.

For a definition of influenza-like illness (ILI) activity levels and a map of Ontario illustrating health unit locations and health regions, please refer to the Appendix. If you would like to provide feedback, please contact Shafiq Chowdhury (shafiq.chowdhury@moh.gov.on.ca, 416-327-7807) or Anne-Luise Winter (anne-luise.winter@moh.gov.on.ca, 416-327-7301).

Table 1: Summary of laboratory-confirmed influenza cases (sporadic) and institutional outbreaks, by health region, December 4 to December 10, 2005.

	HEALTH REGION							TOTAL
	North West	North East	Eastern	Central East	Toronto	South West	Central West	
Lab-confirmed Influenza cases*								
Influenza A	0	0	0	1	0	0	0	1
Influenza B	0	0	0	0	0	0	0	0
Unspecified†	0	0	0	0	0	0	0	0
Total new cases	0	0	0	0	0	0	0	1
Institutional influenza outbreaks‡	0	0	0	0	0	0	0	0

SOURCE: MOHLTC (iPHIS, Health Unit Reports to PHD, Provincial Appendix D and Appendix E Database)

* Includes reports of sporadically occurring influenza through iPHIS, as well as cases in institutional outbreaks, with dates of onset in the surveillance period.

† Type of influenza, i.e. A vs B, was not specified in iPHIS (i.e. Influenza subtype dropdown menu left blank or reported as "Unspecified").

‡ Laboratory-confirmed outbreaks in institutions during the surveillance period.

* Cumulative case counts include late reports and records that are otherwise reconciled. Therefore, cumulative counts may not equal new cases plus previous cumulative value.

† Confirmed cases of influenza can include laboratory-confirmed and epi-linked cases.

‡ Type of influenza, i.e. A vs B, was not specified in iPHIS (i.e. Influenza subtype dropdown menu left blank or reported as unspecified)

Influenza Subtype(s):

During week 49, 1,472 influenza tests were conducted by the National Microbiology Laboratory, with a total of 20 positive tests; 8 influenza A and 12 influenza B.

Since the start of the 2005-2006 influenza season, the National Microbiology Laboratory (NML) has antigenically characterized 17 influenza viruses; 10 A/California/07/04-like viruses (3 in Ontario, 3 in Saskatchewan and 4 in British Columbia), 4 B/Hong Kong/330/01-like viruses (3 in Alberta & 1 in British Columbia) belonging to the B/Victoria/2/87 lineage, and 3 B/Shanghai/361/02-like viruses (Ontario, Alberta & British Columbia) belonging to the B/Yamagata/16/88 lineage.

As this data is obtained from FluWatch (Public Health Agency of Canada), the data presented is inclusive to December 10, 2005.

Figure 1: Total number of influenza tests performed and percent of positive tests in Ontario reported to the Centre for Infectious Disease Prevention and Control (CIDPC), by report week.

Source: Public Health Agency of Canada

* Total numbers reported include late reports; therefore totals may not be equal to the sum of the weekly numbers.

Note: Cumulative numbers for season to date are available through FluWatch:

<http://www.phac-aspc.gc.ca/fluwatch/>

** Season to date includes all outbreaks in which the date of onset of the first case occurred between September 1, 2005 and December 10, 2005.

* New outbreaks are those in which the date of onset of the first case occurred in the surveillance period December 4 to December 10 (week 49)

Figure 2: Influenza activity* in Ontario by health unit, December 04 to December 10 2005 (Week 49).

SOURCE: MOHLTC (Provincial Influenza Activity Report (Appendix C) Database)

* Influenza activity levels, as represented on this map, are assigned by local public health units and reported to the MOHLTC by the Tuesday following the end of the surveillance week at 4 pm. Activity levels are assigned based on laboratory confirmations, ILI reports from various sources, and laboratory-confirmed institutional outbreaks. Please refer to detailed definitions for the 2005-2006 season included in the Appendix.

Figure 3: Average influenza-like illness rate (per 1,000 patient visits) reported by sentinel physicians* in Ontario, by report week, compared to Ontario average† (1996/96 to 2004/05 seasons).

Source: Public Health Agency of Canada

* Sentinel physician information is reported to Public Health Agency of Canada.

† No data available for mean rate in previous years for weeks 21 to 39 (1996-1997 through 2002-2003 seasons). During weeks 20-39, 2002-2003/2004-2005 seasons, ILI is reported once every two weeks, on even weeks only.

* Sentinel physician information is reported to the Public Health Agency of Canada

Note: The small numbers of sentinel physicians reporting at the local level make the ILI rates unstable. Please interpret these data correspondingly.

APPENDIX

Definitions for influenza activity levels:

No Data: No activity report corresponding to the surveillance week was received at the Ministry of Health and Long-Term Care Call Centre by the Tuesday (at 4 p.m.) following the end of the surveillance period.

No Activity = No ILI and no laboratory-confirmed cases* or outbreaks occurred.

Sporadic: sporadically occurring ILI **AND** laboratory-confirmed influenza* with NO outbreaks detected within the influenza surveillance region†

Localized: sporadically occurring ILI **AND** laboratory-confirmed influenza* together with outbreaks of ILI in schools and worksites or laboratory confirmed influenza in residential institutions occurring in less than 50% of the influenza surveillance region(s)

Widespread: sporadically occurring ILI **AND** laboratory-confirmed influenza* together with outbreaks of ILI in schools and worksites or laboratory-confirmed influenza in residential institutions occurring in greater than or equal to 50% of the influenza surveillance region(s)

* Confirmation of influenza within the surveillance region at any time within the prior four weeks

† Sub-regions within the province or territory as defined by the provincial/territorial epidemiologist

Influenza-Like Illness (ILI) Definitions:

A) ILI in the general population:

Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which could be due to influenza virus. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.

B) ILI/Influenza outbreaks:

Schools and work sites: greater than 10% absenteeism on any day most likely due to ILI

Residential institutions: two or more cases of ILI within a seven-day period, including at least one laboratory-confirmed case.
